Profile

Computer Science and Engineering undergraduate (Class of 2027) with hands-on internship experience designing, troubleshooting, and optimizing Python and Node.js backend services, RESTful microservices, and machine learning pipelines. Strong foundation in data structures, algorithms, object-oriented design, operating systems, computer networks, and database query optimization, complemented by AWS cloud training.

Skills

Programming Languages: Python, Java, JavaScript, SQL
CS Fundamentals: Data Structures & Algorithms, Object-Oriented Design (OOD), Operating Systems, Computer Networks, DBMS, Complexity Analysis
Backend & Distributed Services: Python (Flask), Node.js, Express.js, RESTful APIs, Microservices Architecture, Webhook & Concurrency Handling
Databases: MongoDB (Compound Indexing, Aggregation Pipelines), MySQL, PostgreSQL, Query Optimization
Frontend Technologies: React.js, HTML5, CSS3, Tailwind CSS
Cloud, AI & Developer Tools: AWS (Cloud Foundations), Scikit-learn, NumPy, Pandas, OpenAI API, Git, GitHub, Postman

Experience

Backend Developer Intern — KriBud Web Tech
- Designed, developed, and maintained modular backend services for user authentication, order lifecycle management, and database operations using Node.js, Express.js, and MongoDB.
- Diagnosed query bottlenecks and refactored MongoDB access patterns using compound indexing and aggregation pipelines, reducing API response latency and improving backend workflow efficiency by 35%.
- Structured modular data-access layers and request validation pipelines within collaborative Git workflows to eliminate redundant database queries and prevent state inconsistencies under concurrent workloads.

Projects

InsureAI (InsurePred) – Multi-Tier Health Insurance Premium Prediction | *MERN, Python, Flask, Scikit-learn*
- Architected a multi-tier prediction platform integrating a React and Node.js/Express application layer with a decoupled Python Flask machine learning microservice for real-time insurance premium estimation.
- Designed RESTful inter-service communication protocols, strict schema validation, and error-handling middleware between the Node.js gateway and Flask inference engine to maintain low-latency responses.
- Modeled scalable MongoDB schemas and indexing strategies to store user profiles, prediction inputs, and historical inference logs for analytical workloads.
- Trained and evaluated Scikit-learn regression models on demographic and health datasets, performing end-to-end API integration testing and payload debugging via Postman to ensure deterministic inference outputs.

OrderNow – Food Delivery & Grocery Platform | *MongoDB, Express.js, React.js, Node.js, Stripe Connect*
- Developed a full-stack food and grocery ordering platform supporting catalog filtering, cart state synchronization, and real-time order lifecycle tracking across concurrent client sessions.
- Integrated the Stripe Connect payment gateway and webhook verification handlers to process checkout transactions, asynchronous payment callbacks, and deterministic order status transitions securely.
- Implemented atomic database state updates, idempotent request guards, and structured error logging to prevent race conditions and debug transaction failures under concurrent user requests.

Education

RVR & JC College of Engineering, Guntur — B.Tech in CSE (AI & ML) | **CGPA: 8.34**
Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks, DBMS, Complexity Analysis

Sri Chaitanya Jr College, Narasaraopet — Intermediate (MPC) | **Percentage: 95%**

Certifications

- **Cloud Engineering** — AWS Academy
- **Certified React.JS Developer** — GeeksforGeeks
- **Node.js Complete Course** — GeeksforGeeks
- **Full-Stack Web Development** — Udemy
