Profile

Computer Science and Engineering undergraduate (Class of 2027) with production internship experience building and optimizing Node.js and Python backend services, payment-integrated RESTful APIs, and multi-tiered web applications. Strong foundation in data structures, algorithms, object-oriented design, and database query optimization, utilizing AI-assisted development workflows (Codex CLI, Antigravity, OpenCode) and rigorous API validation.

Skills

Programming Languages: Python, Java, JavaScript, SQL
CS Fundamentals: Data Structures & Algorithms, Operating Systems, Complexity Analysis, DBMS
Backend & APIs: Node.js, Express.js, Flask, RESTful APIs, Microservices Architecture, Stripe Connect, Webhooks
Databases: MongoDB (Compound Indexing, Aggregation Pipelines), MySQL, PostgreSQL
Frontend Technologies: React.js, HTML5, CSS3, Tailwind CSS
Cloud, AI & Developer Tools: Postman, Git, GitHub, Codex CLI, Antigravity IDE, OpenCode, OpenAI API, AWS, Scikit-learn, NumPy, Pandas

Experience

Backend Developer Intern (Node.js) — *KriBud Web Tech* **Aug 2025 – Mar 2026**

- Designed, developed, and maintained production backend services for user authentication, multi-vendor order management, and database operations using Node.js, Express.js, and MongoDB.
- Refactored MongoDB query patterns using compound indexing and aggregation pipelines, reducing API response latency and improving backend workflow efficiency by 35%.
- Structured modular data-access layers, request validation pipelines, and Postman API test collections within Git-based workflows to eliminate redundant database calls and verify endpoint reliability under concurrent workloads.

Projects

OrderNow – Multi-Vendor Food & Grocery Platform (Backend) | *Node.js, Express.js, MongoDB, Stripe Connect* GitHub

- Engineered the core backend architecture during the KriBud Web Tech internship for a multi-vendor ordering platform, exposing RESTful APIs for merchant onboarding, catalog management, cart state, and order lifecycle tracking.
- Integrated **Stripe Connect** to automate vendor onboarding and merchant payouts alongside customer checkout payment processing.
- Implemented asynchronous **Stripe Webhooks** to verify payment events and trigger deterministic order status transitions across customer and vendor workflows.
- Handled backend concurrency and validated REST API endpoints via **Postman** to maintain consistent transaction states under concurrent user requests.

InsureAI (InsurePred) – Health Insurance Premium Prediction | *MERN, Python, Flask, Scikit-learn* GitHub

- Architected a full-stack prediction platform integrating a React and Node.js/Express application layer with a decoupled Python Flask machine learning microservice for real-time insurance premium estimation.
- Designed RESTful inter-service communication contracts and request payload validation between the Node.js backend and Flask inference engine to maintain low-latency responses.
- Modeled MongoDB schemas and query strategies to store user profiles, prediction inputs, and historical query logs, validating end-to-end API workflows across frontend, backend, and ML inference layers via **Postman**.

Education

RVR & JC College of Engineering, Guntur — *B.Tech in CSE (AI & ML) | CGPA: 8.4* **2023 – 2027 (Expected)**

Sri Chaitanya Jr College, Narasaraopet — *Intermediate (MPC) | Percentage: 95%* **2021 – 2023**

Certifications

- Cloud Engineering — AWS Academy
- Certified React.JS Developer — GeeksforGeeks
- Node.js Complete Course — GeeksforGeeks
- Full-Stack Web Development — Udemy
